The language of communication in plants

Benefits :-

- Ultra Mega helps in color development in red and black grapes, strawberries and red apples, as it helps in the gene expression of genes related to the production and accumulation of anthocyanin pigments.
- Ultra Mega plays a significant role in enhancing antioxidant production in plants, which improves plant resistance to stress.
- Ultra Mega plays a significant role in enhancing the plant's acquired immunity by enhancing its defense systems, producing toxic compounds that combat fungal, insect, and bacterial pathogens, such as plant phytoalexins, nicotine, proteinase inhibitors, thiols, thionin and osmotin.
